ABOUT

The Warsaw College of Engineering and Health (*Wyższa Szkoła Inżynierii i Zdrowia w Warszawie, WSiIZ*) is a private higher education institution, existing since 2003. We run undergraduate (bachelor and engineer), master and postgraduate studies. Our mission is modern concept of education and vocational training of highly qualified staff that better matches the needs and demands of the rapidly developing economy and the labour market with a view to high rate of employability of our graduates.

In an unending drive towards continuous development we adapt to the economic, technological and scientific conditions to better cooperate with business-environment institutions. We allow for enough flexibility in our study programmes to be always on par with what is new in the world of technology and innovation and to be able to bring it in to our classrooms.

Our exquisitely equipped workrooms and laboratories are backed by the best brands in the business. We always make sure that our students not only work with the best professionals in the business, but also that they have top notch equipment at hand that corresponds to the one later on used on the job.

The Warsaw College of Engineering and Health is an educational institution with practical profile which means that our focus is on practical classes, laboratories and workshops to

prepare our students to real-life conditions at their future workplace. To this end we've already established close cooperation with business environment institutions and we're still working on new cooperation agreements.

Below please find the programmes at the Warsaw College of Engineering and Health you can choose from:
